

Home Renovation Analysis

Michael Tsypin

Overview

An analysis of King County House Sales dataset determining how different home improvements affects profitability when selling a home.

Outline

- Business Problem
- Data and Process Steps
- Results
- Conclusions

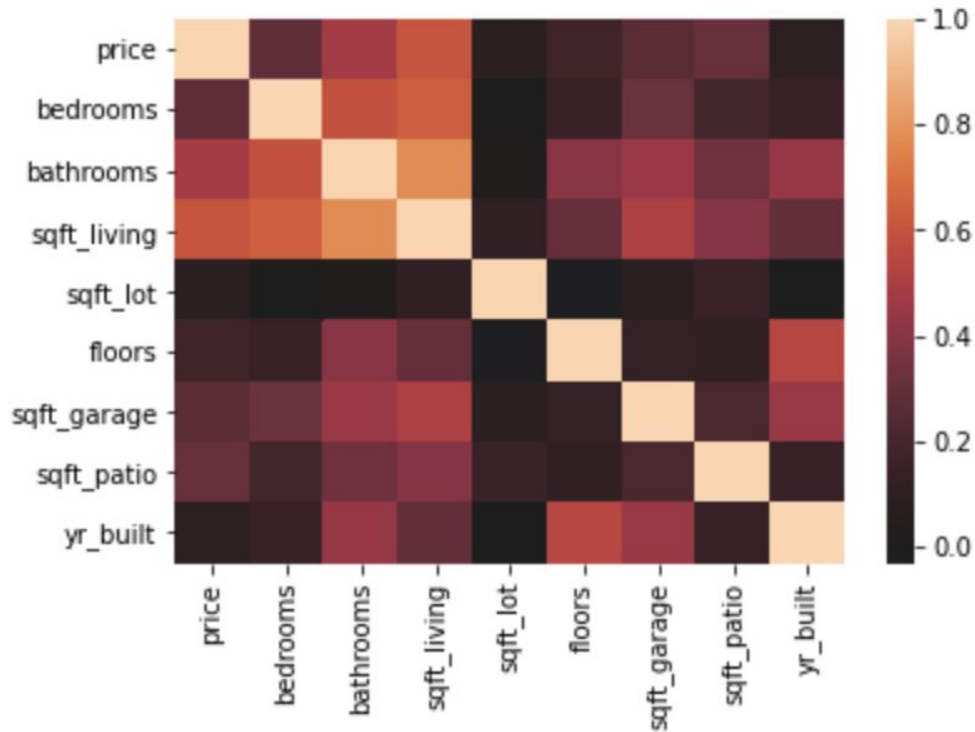

Business Problem

- Homeowners and real estate agents are looking for ways in how different renovations affect their home's price and by how much
- Find the renovations that result in the greatest increase on home's price

Data and Process Steps

- Utilizing multiple linear regressions to determine best renovations for homes

Data and Process Steps

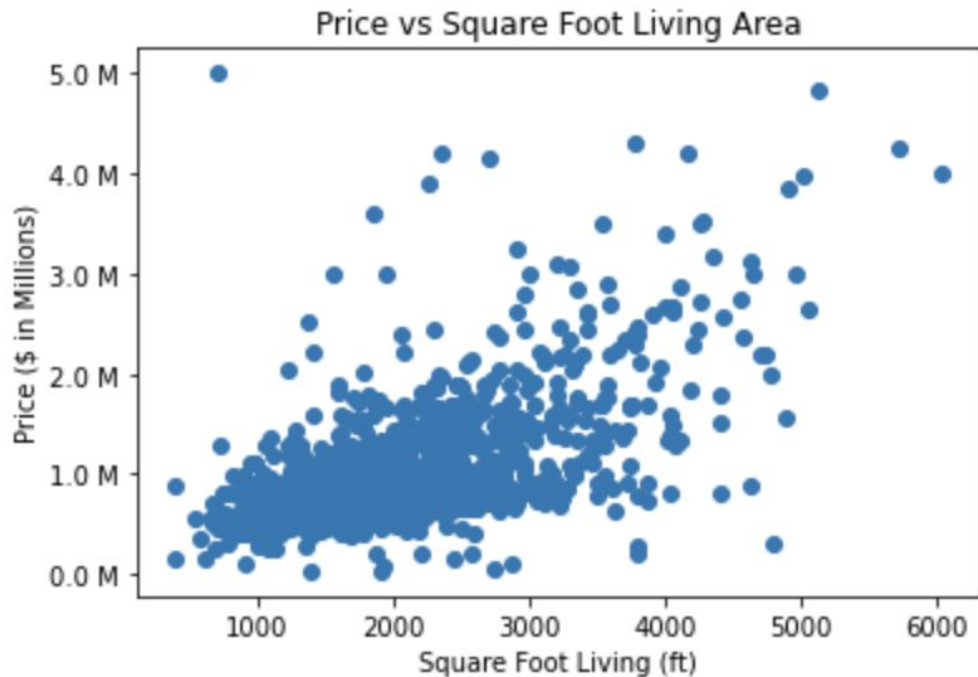

- Find highest correlation with Price

Results

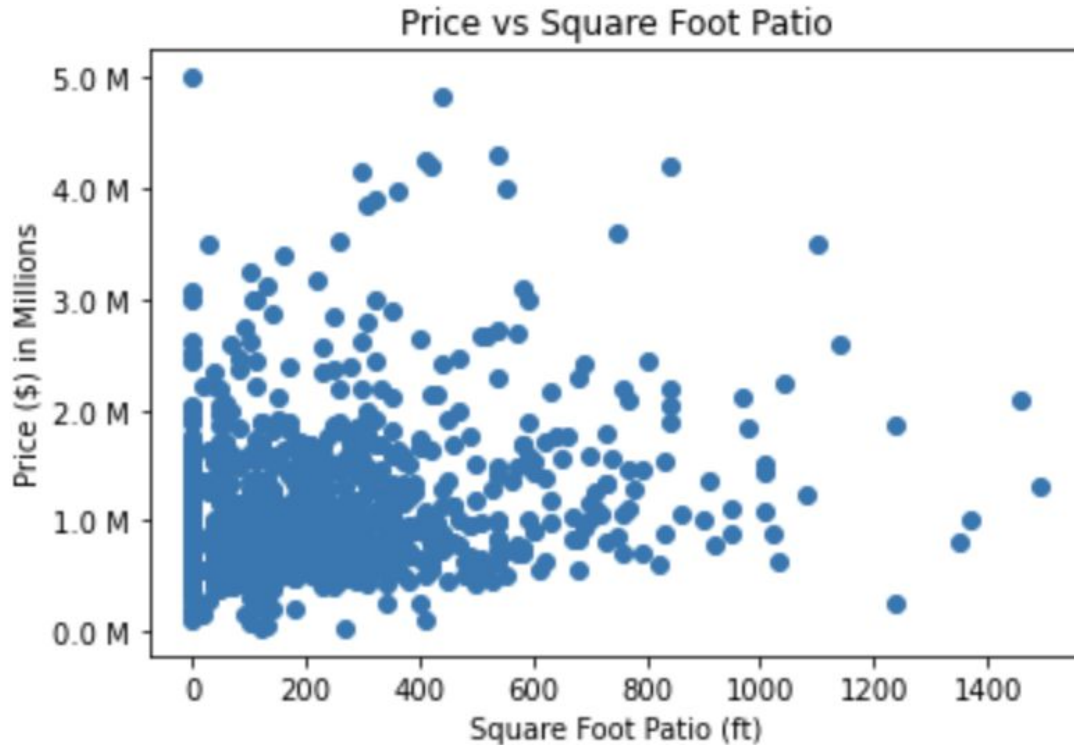

- 42% variance in price
- Results statistically significant

Results

- For every increase in 1 square footage of the living area, expect an associated increase of \$478 in price

Results

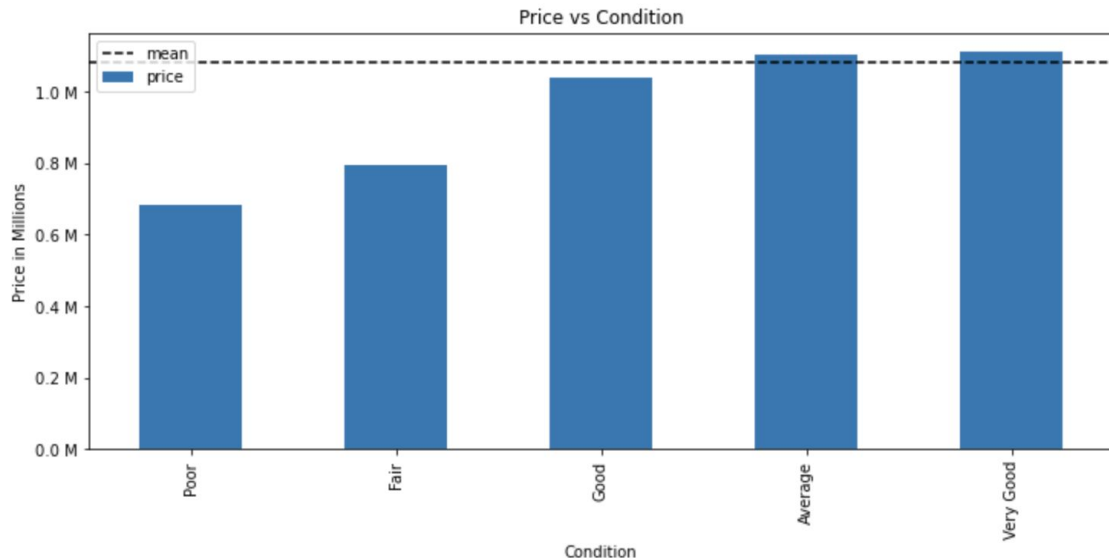

- For every increase in 1 square footage of the patio, expect an associated increase of \$199 in price

Results

- Mean Absolute Error of 365,179 USD
 - On average, model has error of 365179 USD when predicting price of house

Results

- The Very Good condition will result in the largest increase in price by 32%

Conclusion

- Improve the overall condition of the house to add the most value when selling a home
- Add square footage to the patio and living area to also help increase the value of the home

Thank you!
